Information technology in banking and finance – improve core services, increase productivity!

Here's how your organisation can benefit from Igel thin clients:

- by creating an IT environment that promotes efficient, productive company processes,

- by creating a transparent cost structure,

- by ensuring necessary flexibility,

- by ensuring proper levels of security.

Deverill's ability to design and deliver world class computing solutions utilising IGEL thin clients and our unique managed services can help you deliver better IT in the Finance Sector.

The competitiveness in the banking industry will only continue to intensify over the coming years. Under these conditions, IT is playing a pivotal role, with a focus on modernising IT infrastructures and permanently cutting costs.

Two primary features of centralised and standardised IT services are server-based computing and desktop virtualisation with thin clients. This lean approach allows employees to always access the same desktop, from anywhere: in the company headquarters, in branch offices or even in their home office.

With solutions developed by IGEL, work sessions can even be transferred from one workstation to another without having to restart the applications each time. But that's not all. IGEL thin clients can cut power consumption by up to 51%, save money and help protect the environment through less use of materials, less transport and less electronic waste (e-waste).

Smart investment means continuous savings! By migrating to virtual desktops or server-based computing architectures, combined with modern thin clients, you will open up a whole new world of economy and efficiency.

By implementing this lean system infrastructure, administrative costs can be cut by up to 70%! In addition, a fundamental feature of server-based computing is remote management of IT workstations across all company locations. With IGEL's modern management software, IGEL thin clients can be completely remotely configured in minutes.

The most important challenges facing today's financial services sector are:

| | |
|-------------------------------------------------|------|
| Increasing customer loyalty | 66 % |
| Cutting operative costs | 66 % |
| Optimizing business processes | 58 % |
| Increasing market share/acquiring new customers | 45 % |

Innovative technology ideally applied.

The high flexibility of IGEL thin clients, which have no cooling fans and thus operate soundlessly, enables easy, hassle-free integration of specialised applications.

In mixed IT environments at banks and financial service providers, IGEL thin clients can be readily integrated into existing structures.

The great number of integrated network, system and application protocols make them exceptionally easy to connect and allow them to be used in the greatest variety of server and host environments. With their ability to establish wireless connections, IGEL thin clients also support WLAN integration so that users can enjoy the convenience of mobile operation.

Additionally, the range of included firmware offers a large number of useful applications, ranging from local browsers to SAP-certified interfaces. The full range of multimedia applications that be customised as needed. This means that IGEL thin clients can be easily adapted to meet specific customer needs.

In addition, most IGEL devices are also available with integrated smart card readers that support many kinds of smart card-based security solutions, from simple authentication to complex certificate-based security systems. With IGEL thin clients, you can be sure that your confidential financial information is well-protected.

- Several serial and parallel interfaces for connecting external devices
- Up to four monitors per thin client
- Simultaneous access to old and new applications, such as mainframes,
- Windows®, VDI and VoIP
- Greatly reduced power consumption and heat generation compared to a traditional PC
- Simple, easy and fast IT support / user help desk (UHD)
- Hot desking, even from home
- Smart card-based security solutions
- Design features that prevent theft and minimise downtime
- Robust, noiseless units (no cooling fans)
- DVI and analog connections for high-resolution dualview operation in different widescreen formats
- "Plug in and go": easy set up within 5 minutes means fast rollouts
