Optimum IT Structures for Healthcare!

Networking Infrastructure Solutions
Advanced Infrastructure Solutions
Information Worker Solutions
Mobility Solutions

2009 Preferred Partner

Deverill acknowledges the ownership of all trademarks and trade names used throughout this document.

Here's how your organisation can benefit from Igel thin clients:

- by having easy access to digital patient files,

- by cutting costs while maintaining the same or even better performance,

- by ensuring fail-safe operation, even in 24-hour use,

- by protecting sensitive data,

- by creating optimum IT structures for hospitals and health insurance providers.

Deverill's ability to design and deliver world class computing solutions utilising IGEL thin clients and our unique managed services can help you deliver better IT in the Healthcare Sector.

Whether it concerns digital patient files, workflow management, or to best meet the requirements mandated by the recent healthcare reforms, hospitals, clinics and health insurance providers, all depend on information technology. Yet, despite this undeniable fact, most healthcare organisations are not exploiting the great potential of modern information technology to the fullest.

At the same time, healthcare managers are facing increasing costs and decreasing reimbursement rates.

Two primary features of centralised and standardised IT services are server-based computing and desktop virtualisation with thin clients. This lean approach allows employees to always access the same desktop: in the company headquarters, in branch offices or even in a home office.

With solutions developed by IGEL, work sessions can even be transferred from one workstation to another without having to restart the applications each time. But that's not all. IGEL thin clients can cut power consumption by up to 51%, save money and help protect the environment through less use of materials, less transport and less electronic waste (e-waste).

Smart investment means continuous savings!

By migrating to virtual desktops or server-based computing architectures combined with modern thin clients, you will open up a whole new world of economy and efficiency. By implementing this lean system infrastructure, you can cut administrative costs by up to 70%! Additionally, a fundamental feature of server-based computing is remote management of IT workstations across all company locations. With IGEL's modern management software, IGEL thin clients can be completely remotely configured and are ready to go in minutes.

Innovative technology ideally applied.

The high flexibility of IGEL thin clients enables smooth, problem-free integration of specialised applications. Because IGEL thin clients do not contain cooling fans, they are especially suited for use in sensitive hospital environments.

Their great number of integrated network, system and application protocols make them exceptionally easy to connect and allow them to be used in the greatest variety of server and host environments, thus facilitating the networking of all types of services at hospitals and insurance companies.

With their ability to establish wireless connections, IGEL thin clients also support WLAN integration so that users can enjoy the convenience of mobile operation.

In addition, the range of included firmware offers a large number of useful applications, from local browsers to a SAP-certified interface. A full range of multimedia applications can be customised as needed.

IGEL thin clients support keyboards that offer integrated card readers which facilitate settlements with insurance companies and patients.

A patient's insurance card can be easily swiped and read. In addition, IGEL devices are also available with integrated smart card readers that support many kinds of smart card-based security solutions from simple authentication to complex certificate-based security systems. With IGEL thin clients, you can be sure that your confidential patient data is well-protected.

Secure logins in less than 10 seconds allow mobile staff members fast access to patient data from any device (Citrix Hot Desktop with Windows® XP Embedded)

Secure access to all types of patient data

Touchscreen for easier data entry

Secure access by mobile personnel to confidential data

Secure, reliable electronic connections to patients at home

Bandwidth-optimised WAN-based printing, even far away from central servers and databases through features like Thin Print

Support for dictation systems from companies like Kuhlmann and Grundig Business Systems

Insurance card / smart card support

Easy, problem-free constant operation 24/7 with different users

No fans mean no noise and no circulation of air and germs

Stable and low-maintenance operating systems

Deverill

Deverill is a leading provider of integrated IT Solutions and Services to public and private enterprises throughout the UK.

Established in 1979 with a prestigious client base, Deverill has acquired a vast experience of IT product, service and training delivery. It prides itself on its ability to understand the needs of its clients and to provide solutions that meet those requirements in full. To ensure that it meets its own very high quality standards Deverill is an ISO9001:2000 Approved Company with the business procedures and processes in place to ensure we meet our quality of service goals.

We are here for you

Our IT team has extensive know-how in the healthcare sector and is available for personal consultation. We will support you with an in-depth analysis of your needs, establish specifications, and of course, we will assist you in implementing our equipment into your existing system.

See IGEL thin clients in practical application for yourself. Your personal test equipment is ready for you now.
